

Digital Waste Tracking

How does this effect Perrys' customers and suppliers.

Digital Waste Tracking (DWT) will fundamentally change how waste is recorded and tracked across the UK.

1 Why is Digital Waste Tracking Being Introduced?

Waste frequently passes through multiple businesses and facilities before reaching its destination. The new digital tracking platform is designed to make that journey easy to follow in real-time, creating an unbroken digital record of waste as it moves through the waste chain, improving data transparency, supporting regulatory compliance and help tackle waste crime.

Better data will also help both Perrys and our customers identify new opportunities to reduce waste, improve source-segregation, and maximize recycling efficiency.

Greater transparency

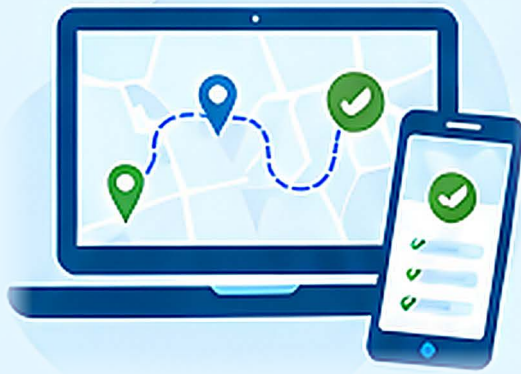

Regulatory compliance

Tackling waste crime

More recycling opportunities

2 Phased Implementation Timeline

The implementation of DWT follows a strict, legally mandated phased rollout...

Phase 1: From 1 October 2026

- **Scope:** Permitted waste-receiving sites in England and Wales.
- **Requirement:** These facilities must report all incoming waste movements directly via the new digital service.

Phase 2: From October 2027

- **Scope:** The wider waste industry, including waste collectors, carriers, brokers, dealers, and registered exemption holders.
- **Requirement:** Transition of all remaining transit and tracking paperwork to the digital system.

3 Compliance Stages

Perrys Recycling operates strictly within all waste-carrier requirements and our registered exemptions. A permit exemption is not an exemption from environmental legislation or waste duty-of-care responsibilities. Where an exemption applies, Perrys must continue to follow its precise conditions and limits.

We are pleased to announce that although we do not have to comply until **October 2027**, we are preparing for reporting compliance by **October 2026**. From now, until **October 2027**, we can continue using standard paper waste transfer notes for all movements as normal, although as part of our next software roll out, we will be transitioning to digital PDA's early in 2027. This will ensure continued compliance and reporting. Therefore, as you can be confident that your services will continue as normal, and that you will be informed of any changes prior to them happening.

If you need any further support or guidance please don't hesitate to contact us – info@perrys-recycling.co.uk

4 Additional guidance.

1. **Perrys Recycling – exemptions and permits:**

Key message

Digital Waste Tracking will improve visibility of waste movements and help regulators combat waste crime by digitising waste receipt records. This will make records easier to verify and reduce the risk of waste being misdescribed, untracked, or managed outside regulatory requirements.

The journey to a more transparent and sustainable future.

Track waste

Ensure compliance

Protect the environment

Build a cleaner future

Our commitment.

We are preparing for Digital Waste Tracking and working closely with our customers and suppliers to ensure a smooth transition.
